DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-53 and 68-70, drawn to a method of routing packets between a source and destination, wherein discriminatory value changes between successive packets and is not based solely on value of other data in each data packet, classified in class 709, subclass 239.
- II. Claims 71-84, drawn to a different method than above for securely routing packets between a first and second computer including transmission of packets from the first computer wherein sender and receiver IP addresses are selected from a first and second set of IP addresses to match a first and second set of IP addresses at second computer, classified in class 713, subclass 201.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
